In the Claims

- 1-27. (Canceled)
- 28. (Currently amended) A method of coating an implantable device comprising applying a composition onto the implantable device to form a coating, the composition comprising
- (1) a first block copolymer comprising a block having a glass transition temperature (T_g) below about body temperature and a second block having a T_g or a melting temperature (T_m) above about body temperature, and
- (2) a material comprising a biobeneficial polymer conjugated with the first block copolymer,

 $\underline{\text{wherein the block having a T_{p} or a T_{m} above about body temperature comprises styrene}}$ $\underline{\text{monomers, and}}$

wherein the biobeneficial polymer is conjugated to the styrene monomers by a process comprising acylation of the styrene monomers.

- (Previously presented) The method of claim 28 wherein the composition further comprises a bioactive agent.
 - 30-35. (canceled)
- (previously presented) The method of claim 28 wherein the implantable device is a stent.
 - 37-53. (canceled)
